Seniors to Prove Their Mettle

The College will hold the annual Senior Design Conference May 7, 2010. According to Dr. Mel Corley, Director of Mechanical Engineering, the Senior Design Projects provide students with the last challenge needed to prove they’re ready for the workplace. "Senior capstone projects are primarily rich educational experiences that require students to integrate all of the topics they have studied in their college careers. Successful completion of a year-long design project experience prepares students to enter the professional ranks confident of their ability to guide a real-world project through to a successful completion."

The conference will kick off after the noon hour in the atrium of the biomedical engineering building. Students, parents and friends are welcome to attend.
